

Smith Cooper

Customer:
Smith Cooper

Location:
Nottingham

Main Contractor:
DSP Interiors

Product:
Polar Vision,
Timber doors

The Background:

East Midlands based DSP (Interiors) Ltd. were appointed to orchestrate the planning, design and fit out for the relocation of accountancy and business advisory firm Smith Cooper's Nottingham office.

Taking into account the various requirements, all spaces were mapped out within the constraints of the building footprint. The design integrated the spaces seamlessly, incorporating the level differences within flowing circulation spaces.

The Building:

The office, one of nine owned by the firm, was seeking a more prominent location for their premises. A vacant set of retail units located on the ground floor of the prestigious Lace Market Square in Nottingham City Centre 'fitted the bill' perfectly.

With space requirements, staff numbers, storage needs, etc., established, it was then necessary to assess the suitability of the premises. A particular challenge was the subdivision of the existing units, the undulating site and consequent difference in levels. Another major challenge was incorporating all fit out works within a controlled budget and tight timescales.

The Brief in Brief:

Komfort's Solution:

The interior design scheme reflects the nature of the clientele, blending contemporary design with traditional finishes. Acoustics were also high on the agenda given the sensitivity of client confidentiality; acoustic partitions, quilting and flooring treatment was integrated throughout crucial areas. Komfort supplied Polar vision partitions, acoustic stud and track partitions and American Walnut doors and frames with customised film applied to the glass.

The End Result:

"From the very beginnings of the project, at specification stage and right through to completion, they worked alongside us making the process from design to installation much simpler. Another advantage of using Komfort was their ability to provide a vast range of the services we required, enabling us to manage our installation program more effectively. Our client is delighted with the results and we would have no hesitation in partnering with Komfort on future projects."

Think partitioning, think Komfort.
